

$arr = [[0] * 3] * 2$
 $arr = [[0, 0, 0]] * 2$
 $arr = [[0, 0, 0], [0, 0, 0]]$

indices

All indices of 'arr' are pointing towards same list.

$id(arr[0]) = id(arr[1])$

change made in 1 list (row) will affect all the rows.

$arr[0][1] = 10$

$arr = [[0, 10, 0], [0, 10, 0]]$

change in all rows

• $arr = [[0, 0, 0], [0, 0, 0]]$

Each index in arr is pointing to different lists.

$id(arr[0]) \neq id(arr[1])$

change made in 1 row will not affect other rows.

$arr[0][1] = 10$
 $arr = [[0, 10, 0], [0, 0, 0]]$
